

BOP BOX

Big Order Picking & Box Handling System

ADVANTAGES

- Accepts order lists from any remote system or locally from scanner
- Automatically selects the appropriate larger box.
- Calculates Live the volume of boxes.
- Generates unique ID (barcode) for the new boxes for shipment.
- Sends the data and clearance that the order is completed back to ERP or accounting.

The Picking of the materials of an order list and the re-package in a larger box ready for shipping, was never so easy and error free.

With this system the best larger box is automatically selected just big enough to fit the material, automating lists and reducing the time required for implementation and reducing packaging and transportation costs (less volume = less fees)
