

OVEN MONITORING SYSTEM

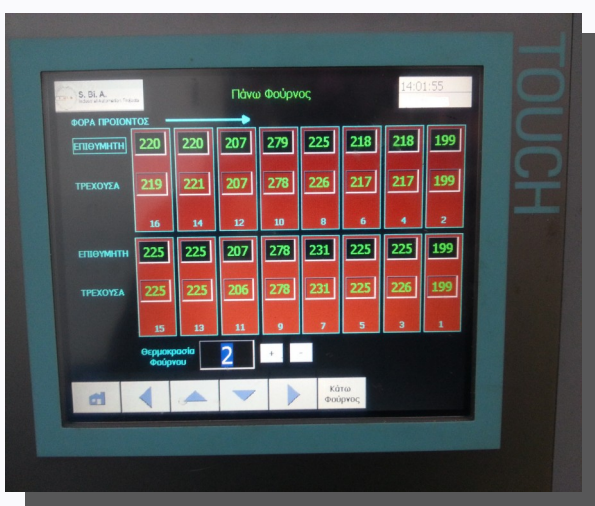

The accurate and efficient monitoring of oven temperatures or refrigerated compartments was always a major issue. With this system, we monitor the oven or chamber temperature in relation to the outside temperature and filling % with product.

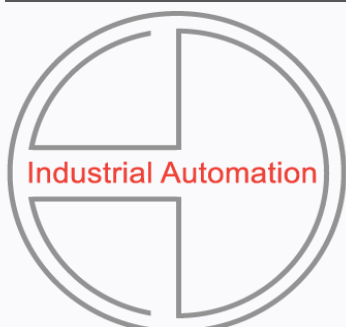

Export data and curves to excel, locally or over a network, for any number of users and alarm them in case of emergency or cross limits.

ADVANTAGES

- Direct monitoring of temperatures.
- Check locally or remotely.
- Prevention of distortions.
- Read error and cause.
